London**

8:30 PM - Pubtime or back to hotel

Tuesday April 30

Breakfast Hotel St. Giles opens 6:30 AM

9:30 AM - Departure from hotel

10:00 AM - **Urban Geology Walk
With Ruth Siddal**

**Meeting point:
Bank Tube Station, (Exit 1)**

Lunch - On your own.

2:00 PM - **Visiting office of Groupwork**

**15 Clerckenwell Close
London**

Break

5:30 PM - **Evening Network Activity at
Stone Masonry Company Showroom**

**The Market Building,
72 - 82 Rosebery Avenue,
London**

Dinner tbd.

Wednesday May 1

Breakfast Hotel St. Giles opens 6:30 AM

11:00 PM - Hotel Check out

Stamford Workshop, Stone Masonry Company; Photo Jonathan Foote

Stone Masonry Company, is placed Stamford, England, where they “combine traditional stonemasonry skills and expert carving with modern design technology and innovative engineering”, in the manufacture of natural stone structures for building projects in collaboration with architects from around the world. Notably they have taken part in the design and production of a number of self supporting lime stone staircases.

Creative Director Pierre Bidaud, will welcome us at the company office, and give us an introduction to the design and manufacturing processes in the workshop.

Ruth Siddall is a London based geologist and PhD from University College London, who for years have been arranging guided walks, where geology and mineralogy is taught through the natural stones found in the buildings of London.

Besides the tour Ruth is giving us in central London, she has also created a long list of self-guided urban geology tours, than can be downloaded for free at her website.

William Smith's famous Geological Map of 1815,

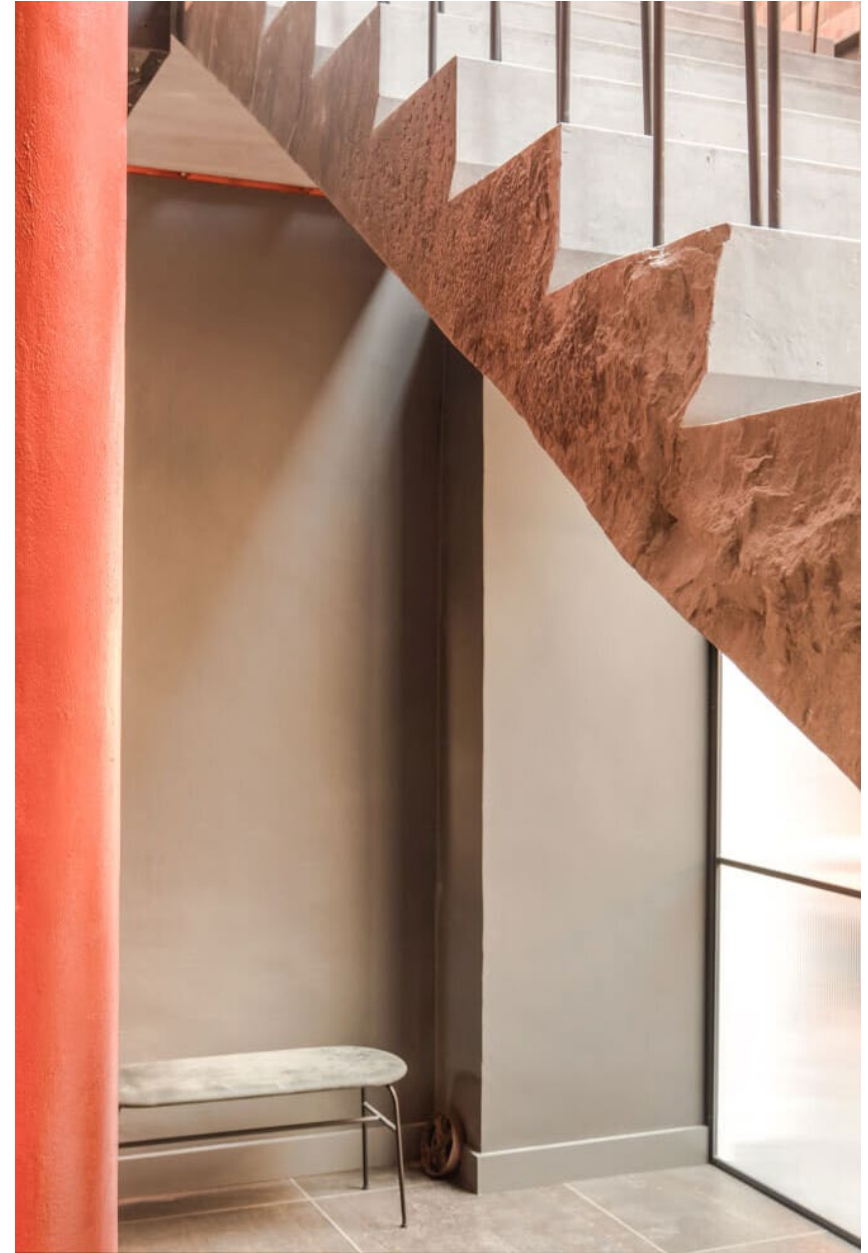

15 Clerkenwell Close

Groupwork is a London based studio, formed by architect Amin Taha. Among many other prominent projects, Group Work is widely known for the design of 15 Clerkenwell Close, where both Taha and the studio now resides.

The building has been acclaimed for its impressive exoskeleton, designed in collaboration with **Webb Yates Engineers**, with its Norman limestone used both as a key structural and uniquely recognisable element. The building is thereby expressing a highly modern and unique system of facade elements, while making clear historic references, most notably to the neighbouring tower of Saint James church, where a similar limestone can be found.
